

## **VTTV x NHBC: Building a New Standard of Learning for South Africa's Home Builders**

The National Home Builders Registration Council (NHBC) plays a critical role in South Africa's construction landscape — protecting consumers, strengthening building quality, and ensuring that every home built in the country meets national standards. To support this mission, the NHBC needed learning materials and assessments that were modern, practical, and aligned with the realities of today's home-building environment.

VTTV stepped forward as a strategic development partner, designing a fully customised suite of Learning Materials (LMs) and a comprehensive Home Builders Assessment that elevate the NHBC's training and compliance ecosystem.

### **A Partnership Built on Quality, Compliance, and Real-World Application**

The NHBC required more than generic training content. They needed a learning solution that:

- Reflects South African building regulations and standards
- Speaks directly to the needs of home builders, contractors, and emerging entrepreneurs
- Supports consistent training delivery across the country
- Aligns with national qualification frameworks
- Reinforces the NHBC's mandate of quality and consumer protection

VTTV collaborated closely with NHBC specialists, technical experts, and training teams to design a learning experience that is both accessible and deeply practical.

### **Customised Learning Materials Designed for the Home-Building Industry**

VTTV developed a complete set of customised Learning Materials that translate complex construction standards into clear, structured, and easy-to-apply content.

These LMs include:

- Step-by-step building process guides

- Regulatory and compliance explanations
- Technical diagrams and visual aids
- Quality control checklists
- Site-based examples and case studies
- Practical activities and knowledge checks

### **A Purpose-Built Home Builders Assessment**

To strengthen the NHBRC's training and certification process, VTTV created a new, fully customised Home Builders Assessment that evaluates real competence — not just theoretical knowledge.

The assessment includes:

- Scenario-based questions grounded in real construction challenges
- Practical tasks that mirror on-site decision-making
- Quality and compliance checks aligned with NHBRC standards
- Clear marking guides for assessors
- A structured, fair, and transparent evaluation process

### **A Modern Learning Ecosystem for a Modern Construction Industry**

The partnership between VTTV and the NHBRC has resulted in a learning system that is:

- Accreditation-ready
- Industry-aligned
- Easy to deliver and scale
- Built for both new and experienced home builders
- Designed to uplift quality across the entire sector

### **Building Better Homes by Building Better Builders**

This collaboration is more than a content development project. It is a national impact initiative — one that supports safer homes, stronger builders, and a more professional construction sector.

VTTV is proud to stand alongside the NHBRC in shaping the future of home building in South Africa.
